

Dinerware for Bars and Pubs

- Best-in-breed card processing security
- Eliminate non-payment or walkouts
- Split checks, split payments, share menu item cost

Order up higher profits and convenience.

Heartland's Dinerware is a point-of-sale solution built specifically for restaurant and bar owners that serves as your business hub and empowers your staff – allowing you to focus on your growing business.

EMV Bar Tab Preauthorization

Using Dinerware's unique EMV bar tab preauthorization feature allows bartenders and servers to open a ticket for customers by simply swiping or dipping a card. The relevant card data is then securely captured with Heartland's PAX EMV technology and assigned to the POS ticket. Drinks and food can be added to the open tab, and the credit card is not needed again for payment and post-authorization. Make your staff's job easier by reducing unnecessary steps during the payment process while ensuring the restaurant can still complete payment on a ticket in the event of a customer walkout.

Speed of Service

Ring in an item and complete a transaction in two touches using Dinerware's unique Fast Pay feature. Split checks with no limits in seconds. Transfer tables from bartenders to servers in an instant. Dinerware's distinctive order entry and ticket management functionality make it the POS of choice for high-volume bars, grills and neighborhood pubs alike.

Happy Hour Pricing Discounts

Highly configurable automatic happy hour discounts remove the possibility of staff pricing mistakes, and you can set up discounts based on sections or jobs. You can even tie discounts to times of the day to turn on and off automatically.
