Connect your phone system to POS system's customer database to know who is calling your restaurant to place an order. POS System will automatically pulls up the customer info & Save time by quickly choosing items from the customer's order history.

**24X7 Technical Support**

### Delivery Driver Dispatch with GPS

With Delivery Dispatch, you can drag and drop to assign orders to drivers, dispatch delivery orders through text messaging, view and print turn-by-turn directions, quickly add or remove drivers, and view orders assigned to specific drivers.

### Self Ordering Kiosk

Self Order Kiosk is an in-store, customer-facing interface that enables guests to place their own orders. You don't have to be large national chain restaurant to afford the benefits of Kiosk ordering anymore. We have it here.

### Integrated Gift and Loyalty

Gift cards are an excellent source of incremental revenue and they help establish brand identity. The Heartland Restaurant POS Gift Card program allows users to process gift cards directly through our Restaurant POS

### Advanced Check Splitting

Servers can split checks evenly up to nine times or split by seats with a single touch. Every split can be tendered with any combination of cash, credit cards, and gift cards. Menu items can be moved between splits.

### EMV Chip Card Processing

Mandated Chargeback liability has shifted. EMV chip card technology protects you. Our EMV technology is out of scope which means NO card data is saved in your terminal. Be fully compliance with our EMV.

### Scan & Pay with Mobile Payment

Give your guests the power to take control of their restaurant checkout experience with QR Code Scan to Pay with their phone. The app allows one touch tipping and securely stores credit card tokens for future payments.

### Cloud Management

Manage your Restaurant anytime, anywhere with our easy to use, cloud based, mobile responsive web-site. You can access deep insight into your restaurant's financial and operational performance & reports.

### Powerful Failsafe Feature

Our POS system allows you to continue to operate your restaurant in the event of a disruption in internet connectivity. Once the internet connection is backed up, all transaction data is automatically updated and synced with our cloud servers.
